Reading · Chess · Hiking · Generative AI & LLMs Video editing · Game design · TCG / Trading card games

01 Profile

Senior Frontend Developer with **7+ years of experience** building scalable, responsive web applications across **fintech, banking, and product companies**.
Specialist in **React and TypeScript** ecosystems, with a track record in international environments delivering complex frontend systems for regulated industries.
Currently exploring the intersection of **frontend engineering and AI**, with hands-on experience integrating LLM and generative APIs into real products.

02 Experience

Senior Systems Analyst – Frontend
Accenture Spain
2025 - Present
Alicante, Spain

→ Frontend development with React for one of Spain's largest retail banking platforms.

→ Working within enterprise-scale delivery pipelines under strict compliance and UX requirements in a heavily regulated financial environment.

Senior Frontend Developer
Newe (B2B Product)
2023- 2025
Remote, Spain

→ Designed and built an internal operations dashboard from scratch using **React 17, Atomic Design methodology, MUI component library**, and Vite.

→ Architected the full component hierarchy ensuring maintainability and consistency. Integrated multiple REST APIs with fully responsive layouts.

Senior Frontend Developer
MiFinity (Fintech)
2021- 2023
Remote, Ireland

→ Built and maintained the corporate web platform for a regulated international fintech operating across multiple European markets.

→ Implemented responsive frontends using **React 16 (Gatsby)**, **Angular 9**, and **GraphQL** for data management.

→ Integrated **Contentful CMS,** enabling the content team to manage multilingual pages independently — eliminating developer bottlenecks for content updates.

Frontend Developer
Luca Tic – Accenture
2019- 2021
Remote, Spain

→ Delivered frontend systems for 3 major Spanish banks using **Angular.js, Angular 2+ and React 0.14**.

→ Led the technical migration of legacy systems from ASP.net and Visual Basic Script to Angular 1.5 and 2, modernising codebases.

03 Personal Projects

CardProxi.es - TCG Proxies Generator
SaaS tool for the Trading Card Game community. Users upload card images and the app generates print-ready PDF proxy sheets. Handles image processing, dynamic layout generation, and PDF output entirely client-side.
React · Typescript · Netlify

AI Video Generator
Automated video generation pipeline integrating OpenAI for script generation, ElevenLabs for voice synthesis, and local TTS as a cost-optimised fallback. End-to-end orchestration of multiple AI APIs into a coherent content production workflow.
OpenAI API · ElevenLabs API · Node.js · Python

04 Education

Bachelor's in Multimedia Engineering
Universidad de Alicante
4-year engineering degree (240 ECTS) covering web development, distributed systems, computer graphics, 3D modelling & animation, videogame design, UX/usability, multimedia content management, and digital image & video processing. Accredited with the **EURO-INF** quality seal.
